

# LIST OF CONTENTS

<b>1</b>	<b>INTRODUCTION</b>	<b>1</b>
<b>2</b>	<b>BASIC TERMINOLOGY</b>	<b>5</b>
<b>3</b>	<b>BRIEF FACTS ABOUT SOUND AND NOISE</b>	<b>11</b>
3.1	SOUND AND NOISE	13
3.2	SOUND PRESSURE	13
3.3	SOUND PRESSURE LEVEL AND THE DECIBEL (DB)	14
3.4	LOUDNESS AND LOUDNESS LEVEL	14
3.5	HOW AN INCREASE OR DECREASE IN SOUND IS PERCEIVED	14
3.6	SOUND INTENSITY AND SOUND INTENSITY LEVEL	14
3.7	FREQUENCY, WAVELENGTH AND SPECTRUM	16
3.8	FREQUENCY WEIGHTING AND THE DB(A) "UNIT"	17
3.9	TIME WEIGHTING AND THE EQUIVALENT SOUND LEVEL, LAEQ	18
3.10	ADDITION OF SOUND SOURCES	19
3.11	SOUND IN AIR AND IN OTHER MEDIA OR MATERIALS	19
3.12	EFFECTS OF NOISE	20
3.12.1	General	20
3.12.2	Fatal or damaging effects	20
3.12.3	Extra-auditory effects (health)	20
3.12.4	Sleep disturbance	20
3.12.5	Interference with communication and intellectual performance	20
3.12.6	Annoyance	21
3.12.7	Monetary effects	21
<b>4</b>	<b>HISTORICAL PERSPECTIVES</b>	<b>23</b>
4.1	NOISE PROBLEMS IN ANCIENT TIMES	25
4.2	GENERAL NOISE CONTROL	25
4.3	TYRE/ROAD NOISE ISSUES IN EARLIER TIMES	27
4.4	EARLY POLISH VEHICLE NOISE STUDY	28
4.5	MEASURING METHODS	32
4.6	DEVELOPMENT OF VEHICLE NOISE EMISSION - AN INCE STUDY	33
4.6.1	The INCE Initiative	33
4.6.2	Background	33
4.6.3	Extent of the Study	34
4.6.4	Review of Change in Limits	34
4.6.5	Type of Tests - Review of Measuring Procedure	34
4.6.6	Results - Annoyance and Community Noise Changes	36
4.6.7	Results - Change of Vehicle Noise Emission Values Measured During Type Approval	36
4.6.8	Results - Noise Changes in Actual Traffic	36
4.6.9	Results - Comparison of Japanese with Other Experiences	37
4.6.10	Reasons for the Limited Effectiveness	38
4.6.11	Recommendations from the study	39
4.6.12	Concluding remarks	40
4.7	THE DEVELOPMENT OF NOISE EMISSION FROM TYRES DURING THE 20TH CENTURY	40
<b>5</b>	<b>TYRE/ROAD NOISE AS PART OF VEHICLE NOISE</b>	<b>43</b>
5.1	VEHICLE NOISE - GENERAL CHARACTERISTICS	45
5.2	VEHICLE NOISE SOURCES	46
5.3	RELATION BETWEEN POWER UNIT NOISE AND TYRE/ROAD NOISE	50
5.3.1	General relation	50
5.3.2	Passenger cars	51
5.3.3	Trucks and busses	52
5.4	SOURCES DIFFICULT TO DISTINGUISH FROM TYRE/ROAD NOISE	55

<b>6</b>	<b>BASIC INFORMATION ABOUT TYRES AND ROAD SURFACES.....</b>	<b>57</b>
6.1	TYRES .....	59
6.1.1	Early history of wheels and tyres .....	59
6.1.2	Refinement of pneumatic tyre construction.....	59
6.1.3	Tread pattern types.....	61
6.1.4	Tyre components, markings, terminology and standards .....	67
6.1.5	Retreaded tyres .....	68
6.1.6	Studded tyres .....	72
6.1.7	Speculations about the future .....	73
6.2	ROAD SURFACES .....	74
6.2.1	Historical notes .....	74
6.2.2	Basic construction features of the most common road surface types .....	78
6.2.3	Some less common surface types.....	84
6.2.4	Some notes about bitumen binders .....	86
6.2.5	The most commonly used surfaces in various situations.....	87
6.2.6	Standard specifications for road surfaces .....	88
6.2.7	Discussion of some basic road surface terms.....	88
6.2.8	What is a "Low Noise Road Surface" .....	88
6.3	ROAD SURFACE TEXTURE TERMINOLOGY AND CHARACTERISATION.....	89
6.3.1	The use of texture profile curve data.....	89
6.3.2	The use of three-dimensional surface data.....	93
6.3.3	Other surface characterisation methods and further reading.....	93
<b>7</b>	<b>TYRE/ROAD NOISE SOURCES AND GENERATION MECHANISMS.....</b>	<b>95</b>
7.1	GENERATION MECHANISMS.....	97
7.1.1	General .....	97
7.1.2	Exploration methods .....	97
7.1.3	Examples: Early studies of noise-texture and vibration-noise relations.....	97
7.1.4	Wave types in tyres.....	103
7.1.5	The impact mechanism: Vibrations induced by tyre tread or surface texture impact.....	104
7.1.6	Tread band versus sidewall vibrations .....	107
7.1.7	Tyre structural resonances.....	107
7.1.8	Tyre/rim bending waves .....	109
7.1.9	Radiation of sound from rim vibrations.....	109
7.1.10	Tangential stick-slip motions (scrubbing) .....	109
7.1.11	Adhesion stick-snap .....	111
7.1.12	Summary of the stick-slip and stick-snap mechanisms .....	112
7.1.13	Torus cavity resonance in the tyre tube .....	113
7.1.14	Air turbulence .....	114
7.1.15	Air pumping.....	115
7.1.16	Air resonant radiation (Helmholtz resonators) .....	119
7.1.17	Pipe resonances in channels formed in the foot-print.....	120
7.1.18	Amplification effect by the acoustical horn between tyre tread and road surface.....	122
7.1.19	Mechanical impedance influence.....	123
7.1.20	Sound radiation from the road? .....	123
7.1.21	Effect of the moving medium on acoustic radiation .....	124
7.1.22	Crossover frequencies .....	124
7.1.23	Wet surface generation mechanisms.....	124
7.1.24	Studded tyre generation mechanisms.....	126
7.1.25	The remarkable peak at 700-1300 Hz.....	126
7.2	THE LOCATION OF THE MAJOR SOURCES AND RADIATION AREAS.....	127
7.2.1	In general about methods, etc .....	127
7.2.2	Measurements utilising sound intensity technique .....	128
7.2.3	Measurements utilising the vibrational mapping technique .....	133
7.2.4	Measurements utilising the near-field holography (NAH) technique .....	133
7.2.5	Measurements utilising the spatial transformation of sound fields (STSF) and time domain holography (TDH) techniques .....	135
7.3	DIRECTIVITY.....	138
7.3.1	Introduction.....	138
7.3.2	Sound radiation to front, side and rear positions .....	138
7.3.3	Directivity in the horizontal plane .....	141

7.3.4	Directivity in the vertical plane .....	142
7.3.5	Three-dimensional directivity.....	143
7.3.6	Conclusions.....	143
7.4	SOURCE LOCATION AND RADIATION - CONCLUSIONS.....	144
7.5	MODELS .....	145
7.5.1	Introduction.....	145
7.5.2	Simple, empirical models.....	145
7.5.3	More complicated, theoretical and semi-empirical models .....	148
7.5.4	"Complete" models.....	151
7.5.5	Input data.....	152
7.5.6	Commercial models.....	153
7.5.7	Ongoing and expected model development.....	154
<b>8</b>	<b>TYRE/ROAD NOISE EMISSION - GENERAL INFLUENCES AND TYPICAL DATA.....</b>	<b>155</b>
8.1	INTRODUCTION.....	157
8.2	TYRE INFLUENCE IN GENERAL TERMS.....	157
8.2.1	Range .....	157
8.2.2	Typical differences between types of tyres.....	158
8.3	ROAD SURFACE INFLUENCE IN GENERAL TERMS .....	159
8.4	TYPICAL TIME HISTORIES .....	161
8.5	TYPICAL SOUND LEVELS (LAMAX) VERSUS SPEED .....	162
8.6	TYPICAL SOUND LEVELS WITH A CLOSE-PROXIMITY METHOD - PLUS MORE ON THE TYRE INFLUENCE.....	164
8.7	TYPICAL FREQUENCY SPECTRA .....	165
8.8	NOISE INCREASE FOR WET ROAD.....	167
<b>9</b>	<b>DRIVER INFLUENCE ON TYRE/ROAD NOISE EMISSION.....</b>	<b>169</b>
9.1	SPEED .....	171
9.1.1	Introduction.....	171
9.1.2	General noise-speed relationship .....	171
9.1.3	The A+B logV relationship .....	172
9.1.4	The very useful A and B constants .....	175
9.1.5	Local irregularities and tonal components.....	177
9.1.6	Noise-speed relations for interior noise .....	179
9.2	TANGENTIAL FORCES.....	182
9.2.1	Driving and braking forces (longitudinal slip).....	182
9.2.2	Side forces (lateral slip) .....	189
9.2.3	Possible mechanisms responsible for the tyre slip effects.....	193
9.2.4	Influence of road crossfall.....	195
9.3	TYRE LOAD AND INFLATION .....	195
9.3.1	Various investigations.....	195
9.3.2	Polish study .....	198
9.3.3	Bridgestone study .....	201
9.3.4	Discussion of mechanisms.....	202
9.3.5	Influence on interior noise .....	203
9.3.6	Conclusions.....	204
<b>10</b>	<b>INFLUENCE ON NOISE EMISSION OF VARIOUS TYRE-RELATED PARAMETERS.....</b>	<b>205</b>
10.1	NUMBER OF TYRES .....	207
10.2	WIDTH AND OTHER DIMENSIONAL INFLUENCES.....	208
10.2.1	General considerations.....	208
10.2.2	Brief review of earlier investigations.....	209
10.2.3	Results obtained at TUG for a large number of tyres .....	210
10.2.4	Results obtained for specific tyre brands .....	212
10.2.5	A wider look at the width relation .....	213
10.2.6	Truck versus car tyre sizes.....	214
10.2.7	The use of oversized tyres and wheels.....	215

10.2.8	Conclusions .....	215
10.3	INFLUENCE OF INNER TYRE STRUCTURE.....	215
10.4	TYRE RUNOUT, UNBALANCE AND OTHER NON-UNIFORMITIES .....	216
10.5	RUBBER HARDNESS AND OTHER MATERIAL PROPERTIES .....	217
10.5.1	Introduction.....	217
10.5.2	Empirical data.....	218
10.5.3	Model calculations.....	220
10.5.4	Conclusions.....	222
10.6	TREAD PATTERN .....	222
10.6.1	Randomisation .....	222
10.6.2	Ventilation .....	226
10.6.3	General layout of grooves and block shapes in the tread pattern.....	228
10.7	DIRECTION OF ROTATION AND ASYMMETRIES BETWEEN SIDES .....	229
10.8	CONDITION (WEAR AND AGEING).....	233
10.9	RETREADED TYRES.....	238
10.10	STUDDED TYRES .....	242
10.10.1	Overall characteristics.....	242
10.10.2	Specific studies.....	243
<b>11</b>	<b>ROAD SURFACE INFLUENCE ON NOISE EMISSION.....</b>	<b>245</b>
11.1	INFLUENCING PARAMETERS.....	247
11.2	SOME BASICS OF ROAD SURFACE CONSTRUCTION .....	247
11.3	MACRO- AND MEGATEXTURE: INFLUENCE ON OVERALL NOISE LEVELS .....	248
11.4	MACRO- AND MEGATEXTURE: MORE SOPHISTICATED TEXTURE DESCRIPTORS.....	249
11.5	MACRO- AND MEGATEXTURE: RELATIONS BETWEEN SPECTRAL LEVELS OF NOISE AND TEXTURE.....	249
11.6	ISOTROPIC AND ANISOTROPIC (ORIENTATED) TEXTURES .....	253
11.7	EFFECT OF JOINTS IN BRIDGES AND CEMENT CONCRETE SURFACES .....	253
11.8	BRIDGE DECK SURFACES.....	253
11.9	SURFACE COLOUR .....	254
11.10	UNEVENNESS .....	255
11.11	MICROTEXTURE AND FRICTION .....	255
11.11.1	Basic and derived properties.....	255
11.11.2	Noise-friction relations measured in field experiments and using conventional wet friction descriptors.....	256
11.11.3	Field experiments at VTI considering the texture-friction interaction .....	257
11.11.4	Comparison of tyre/road noise on pairs of surfaces with similar macrotexture but different microtexture.....	259
11.11.5	Laboratory tests with talcum injection .....	262
11.11.6	Other observations.....	263
11.11.7	Conclusions regarding microtexture and friction influence .....	265
11.11.8	Implications for road surface construction.....	266
11.12	POROSITY.....	266
11.12.1	Terminology - What is a porous surface?.....	266
11.12.2	Modelling of Acoustical Reduction Properties.....	267
11.12.3	Effects .....	267
11.12.4	Noise reduction principles.....	267
11.12.5	The Importance of Air Voids and Thickness Considered Together.....	269
11.12.6	Modified Bituminous Binders.....	270
11.13	STIFFNESS .....	271
11.14	AGE AND WEAR OF THE SURFACE.....	272
11.15	AMOUNT OF WATER ON THE SURFACE.....	273
11.16	OVERALL EFFECT .....	275
<b>12</b>	<b>INFLUENCE OF ENVIRONMENTAL PARAMETERS ON TYRE/ROAD NOISE EMISSION.....</b>	<b>277</b>
12.1	TEMPERATURE.....	279
12.1.1	Introduction.....	279
12.1.2	Some Examples of Measured Effects .....	279

12.1.3	Relation between air, road and tyre temperatures.....	282
12.1.4	Standardisation considerations - Summary of observations .....	282
12.1.5	Possible model for noise - temperature relation based on tyre material properties .....	283
12.1.6	Temperature corrections currently applied in standards or regulations.....	284
12.1.7	Road surface colour effect .....	284
12.2	HUMIDITY.....	284
12.3	WIND .....	285
<b>13</b>	<b>INFLUENCE OF VEHICLE CONSTRUCTION ON NOISE EMISSION.....</b>	<b>287</b>
13.1	SUMMARY OF VEHICLE EFFECTS.....	289
13.2	VEHICLE GEOMETRY.....	291
13.3	RIM EFFECT .....	292
13.4	EFFECT OF WHEEL HOUSING AND ABSORPTION.....	294
13.5	PROPAGATION AND SCREENING EFFECTS.....	295
<b>14</b>	<b>STANDARDS AND METHODS FOR VEHICLE AND TYRE/ROAD NOISE MEASUREMENT .....</b>	<b>297</b>
14.1	OVERVIEW AND SUMMARY.....	299
14.1.1	General .....	299
14.1.2	Advanced methods for research purposes (NAH, STSF, LDV, etc.) .....	299
14.1.3	Measurements aimed at comparing tyres.....	299
14.1.4	Measurements aimed at comparing road surfaces .....	300
14.2	THE ACCELERATION PASS-BY METHOD (ISO 362 AND SIMILAR).....	301
14.3	THE COAST-BY METHOD .....	302
14.4	REFERENCE SURFACE (ISO 10844) .....	304
14.5	THE CONTROLLED PASS-BY METHOD (CPB).....	305
14.6	THE STATISTICAL PASS-BY METHOD (SPB) .....	306
14.7	THE CLOSE-PROXIMITY METHOD (CPX) .....	307
14.7.1	Description of the method.....	307
14.7.2	Subjective assessment of advantages and disadvantages.....	313
14.8	THE TRAILER COAST-BY METHOD .....	313
14.8.1	Description of the method.....	313
14.8.2	Subjective assessment of advantages and disadvantages.....	314
14.9	LABORATORY DRUM METHOD.....	315
14.9.1	Description of the method.....	315
14.9.2	Subjective assessment of advantages and disadvantages.....	316
14.9.3	Replica road surfaces for drums.....	317
14.9.4	Separation of tyre/road contributions by synchronisation .....	320
14.10	GENERAL ASSESSMENT OF THE TEST METHODS.....	321
14.11	SOUND ABSORPTION MEASUREMENTS.....	321
14.12	ROAD SURFACE MEASUREMENTS .....	323
<b>15</b>	<b>MEASURING METHODS – DISCUSSION OF SOME MAJOR TOPICS.....</b>	<b>325</b>
15.1	BASIC OBJECTIVE MEASURES.....	327
15.1.1	Time-history-based overall levels.....	327
15.1.2	Choice of measure - Microphone distance effect (7.5 or 15 m).....	329
15.1.3	Average levels for steady-state sound.....	329
15.1.4	Speed correction.....	330
15.1.5	Time and frequency weighting .....	330
15.1.6	Frequency spectra .....	331
15.2	SOME FACTORS AFFECTING TYRE/ROAD NOISE MEASUREMENTS.....	333
15.2.1	Vehicle .....	333
15.2.2	Load and inflation influence .....	333
15.2.3	Wind noise around the vehicle.....	333
15.2.4	Transmission (axle) noise .....	334
15.2.5	Background noise – in general.....	335
15.2.6	Background noise – Pass-by methods.....	336
15.2.7	Background noise – CPX method.....	337

15.2.8	Some basics of sound propagation and reflections.....	340
15.2.9	Sound propagation and reflection problems for the CPX method.....	342
15.2.10	Meteorological conditions and climate.....	342
15.2.11	Choice of microphone position .....	343
15.2.12	Microphone distance .....	345
15.2.13	Influence of drum curvature when using the Drum method.....	350
15.3	REFERENCE SURFACES .....	353
15.3.1	Introduction.....	353
15.3.2	Reference for road surface "noisiness" comparison.....	353
15.3.3	Standard surface(s) for vehicle testing.....	353
15.3.4	Standard surface(s) for tyre testing.....	353
15.4	TEST TYRES OFTEN REFERRED TO IN THIS BOOK.....	356
15.5	REFERENCE TYRES .....	357
15.5.1	General principles .....	357
15.5.2	Reference tyres for various purposes currently available.....	357
15.5.3	Reference tyres in the CPX method.....	358
15.5.4	Storage and preservation of tyres.....	360
15.5.5	Reference tyres - Recommendation .....	360
<b>16</b>	<b>MEASURING INSTRUMENTS AND OTHER EQUIPMENT.....</b>	<b>361</b>
16.1	BASIC MEASURING INSTRUMENTS .....	363
16.2	EQUIPMENT USED BY THE AUTHORS.....	363
16.3	VEHICLES USED WORLDWIDE FOR CONDUCTING CPX MEASUREMENTS.....	364
16.4	EXAMPLES OF VEHICLES FOR TRAILER COAST-BY MEASUREMENTS.....	370
16.5	EXAMPLES OF LABORATORY DRUM FACILITIES .....	371
16.6	EXAMPLE OF SOUND ABSORPTION MEASURING EQUIPMENT.....	374
16.7	ISO TEST TRACK SURFACES.....	374
16.8	MANUFACTURING OF REPLICA ROAD SURFACES FOR DRUMS.....	374
16.8.1	"Drum Paving" .....	374
16.8.2	"Drum Segment Moulding" .....	376
<b>17</b>	<b>RELATIONSHIPS BETWEEN THE METHODS.....</b>	<b>381</b>
17.1	GENERAL CONSIDERATIONS .....	383
17.2	RELATIONS BETWEEN THE SPB, CPB AND CPX METHODS.....	383
17.3	RELATIONS BETWEEN THE COAST-BY, CPX AND DRUM METHODS.....	384
17.4	CPX VS DRUM METHOD .....	387
17.5	CONCLUSIONS.....	389
<b>18</b>	<b>LOW NOISE COMPROMISING SAFETY OR OTHER IMPORTANT PARAMETERS? .....</b>	<b>391</b>
18.1	THE IMPORTANCE OF STUDYING POTENTIALLY CONFLICTING REQUIREMENTS .....	393
18.2	FRICTION.....	393
18.2.1	Introduction.....	393
18.2.2	Studies before 1997.....	393
18.2.3	The VTITUG experiments.....	393
18.2.4	The TÜV/UBA Experiments in Germany .....	395
18.2.5	Discussion and conclusions .....	396
18.3	ROLLING RESISTANCE.....	397
18.3.1	Introduction.....	397
18.3.2	Experimental work .....	398
18.3.3	The VTITUG experiments.....	399
18.3.4	The TÜV/UBA Experiments in Germany .....	400
